

Harbor Lane Works Bulletin

1. Channel dredging

The channel was dredged to a depth of twelve meters.¹

Dredging in the outer channel removed about forty thousand cubic meters of silt over the winter. The work was paused twice for storms and finished three days ahead of the revised schedule.

¹ Depth is measured at mean low water.

2. Breakwater repairs

Armour units on the north breakwater were reset.²

Dredging in the outer channel removed about forty thousand cubic meters of silt over the winter. The work was paused twice for storms and finished three days ahead of the revised schedule.

² Each armour unit weighs eight tonnes.

3. Navigation aids

Two buoys were replaced with solar-powered units.³

Dredging in the outer channel removed about forty thousand cubic meters of silt over the winter. The work was paused twice for storms and finished three days ahead of the revised schedule.

³ The old buoys were sold for scrap.
